Global Digital Payments Infrastructure IndexSM

About the index

The Tortoise Global Digital Payments Infrastructure IndexSM represents the existing global digital payments landscape. It is a proprietary, rules-based, modified market capitalization-weighted, float-adjusted index comprised of companies that are materially engaged in digital payments, including merchant processing and settlement, real time record keeping, settlement networks, and Fintech products/services that facilitate the ease, efficiency, and speed of electronic transactions. This includes companies whose primary business is comprised of one or a combination of the following categories: credit card networks, electronic transaction processing and associated products/services, credit card issuers, electronic transaction processing software (payments Fintech) or online financial services market places.

Methodology highlights

- Transactions requirement: Requires 50% of gross revenues, operating income, EBITDA or assets be derived from the digital payments
- Investibility: Scaled liquidity requirement facilitates an index that is investible in practice
- Research based: Inclusion criteria based on Tortoise's fundamental research
- No individual securities may be more than a 4.5% weight of the total index market cap as of the reference date

Portfolio allocation*

By sector

By revenue

Due to rounding, totals may not equal 100%.

Disclaimers

The characteristics provided for the index are illustrative of the characteristics of an asset class and are not indicative of the performance of any investment product. The historical data of the index prior to its inception date was calculated on the same basis on which the index is currently calculated. Past characteristics are no guarantee of future results. It is not possible to invest directly in an index.

The Tortoise Global Digital Payments Infrastructure IndexSM (the "Index") is the exclusive property of Tortoise Index Solutions, LLC. Payments = Tortoise Global Digital Payments Infrastructure Total Return IndexSM, a proprietary, rules-based, modified capitalization-weighted, float-adjusted index comprised of companies that are materially engaged in electronic transactions, from merchant processing and settlement, real time record keeping, settlement networks, and Fintech products/services that facilitate the ease, efficiency, and/or speed of digital payments. Technology = The NASDAQ Composite Index, a broad-based capitalization-weighted index of stocks in all three NASDAQ tiers: Global Select, Global Market and Capital Market. Equities = MSCI World Index, a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets. Sharpe ratio is the excess return per unit of risk in an index (total return minus risk free rate divided by standard deviation). Risk free rate is the interest an investor would expect from a risk-free investment and is based on the BofA Merrill Lynch 3-Month Treasury Bill Index, an unmanaged index that measures returns of three-month treasury bills. Standard deviation is a statistical measure of the historical volatility of the index, usually computed using monthly returns. Sortino ratio is calculated as the measure of total return per unit of downside risk in an index. Downside risk or deviation reflects the square root of sum of squared deviations of monthly total returns below 0% divided by total number of months, on an annualized basis.
